Raspberry Ketone

(Capsules)

If you watch the Dr. Oz Show you've probably heard about Raspberry Ketone. Raspberry Ketone is the primary aroma compound of red raspberries (*Rubus idaeus*). It is most commonly used for weight loss; to increase the feeling of fullness and shrink fat cells. It is also used to promote the increase of lean body mass.

Studies have demonstrated that Raspberry Ketone decreases the amount of fat in the liver and visceral adipose, more commonly known as abdominal fat. Raspberry Ketone also significantly increases norepinephrine induced lipolysis (the decomposition of fat) in fat cells. In other words, Raspberry Ketone causes fat in your cells to “break up” more effectively. This helps your body to burn fat faster.

Scientists studied the effects of raspberry ketone on fat cells and observed a higher secretion of adiponectin. Adiponectin is a protein hormone that is used by the body to regulate metabolism. Adiponectin modulates a variety of metabolic processes in the body, which include regulating glucose and breaking down fatty acids. Known as “the thin hormone”, it is present in higher quantities in individuals with lower body fat. Dr. Oz called adiponectin, “A hormone that naturally tricks your body into thinking that it’s thin.”

Each capsule contains 250mg of Raspberry Ketone. There are no known side effects or contraindications to this supplement. It can safely be taken in combination with our Herbal Fat Burner. The dose is one capsule to be taken in the morning. The result; less fat and more energy!

Raspberry Ketone

Raspberry Ketone causes fat in your cells to “break up” more effectively. This helps your body burn fat faster. The result? Less fat and more energy!

A valid prescription is required.

At Palm Beach Pharmaceuticals, we use only the highest grade products under strict quality controls.
