

GHK-Cu

Regenerative & Protective Skincare (Cream)

GHK-Cu is a copper peptide that is found naturally in the human body. It combines the element copper with three amino acids, creating what's called a tripeptide. GHK-Cu promotes the production of collagen and elastin, but also removes damaged collagen and elastin from your skin.

Our skin's ability to withstand damage and repair itself is highest when we're young. But over time our natural levels of GHK, and with it our ability to repair damage, declines significantly.

Breakdown of the dermal matrix coupled with a decline in the removal of damaged proteins can negatively impact your skin's health and dramatically affect its appearance.

Since its discovery in 1973, GHK-Cu has been shown to tighten loose skin; improve skin elasticity, density and firmness; reduce fine lines and wrinkles; repair photodamage and hyperpigmentation; improve hydration and significantly smooth skin for a more youthful appearance.

Research published in the US National Library of Medicine/National Institutes of Health entitled "Regenerative and Protective Actions of the GHK-Cu Peptide", reported that GHK-Cu was shown to:

- Tighten loose skin and reverse thinning of aged skin
- Stimulate wound healing
- Repair protective skin barrier proteins
- Improve skin firmness, elasticity, and clarity
- Reduce fine lines, depth of wrinkles
- Improve structure of aged skin
- Smooth rough skin
- Reduce photodamage
- Reduce hyperpigmentation, skin spots and lesions
- Improve overall skin appearance
- Protect skin cells from UV radiation
- Reduce inflammation and free radical damage

Numerous controlled studies confirm the anti-aging, skin-firming, anti-wrinkle properties of this amazing peptide. GHK-Cu also acts as an antioxidant and promotes the natural production of glycosaminoglycans such as hyaluronic acid.

GHK is a safe compound that has been extensively studied and widely used in anti-aging products for decades without any adverse effects.

GHK-Cu

Youthful Appearance

Decades of research confirm the anti-aging, skin-firming, anti-wrinkle and healing properties of this regenerative peptide.
