

# Thymosin Alpha 1

## Immune System Booster

(injectable)

**IMPORTANT: This product is not intended to treat or cure Coronavirus and is not intended for use by anyone who believes they may have the virus. If you feel you may have the virus, please contact your healthcare provider immediately!**

Thymosin Alpha 1, or TA-1, is a peptide originally isolated from the thymus gland as the compound responsible for restoring immune function and regulating the immune response.

Due to its immune-stimulating effects, TA-1 shows great potential for the treatment of disease or age-related immune suppression. In fact, studies demonstrating improvements in cells of the immune system show TA-1s potential for treating of a wide variety of diseases.

Natural killer cells (also known as NK cells) are a type of white blood cell and a component of the immune system that protects your body. NK cells play a critical role in the rejection of virally infected cells.

Unfortunately, NK cell function can decrease with age or conditions affecting the immune system. That's why older people are often more susceptible to harmful pathogens such as viruses.

### The good news is Thymosin Alpha 1.

Recognized for its antibacterial, antiviral and antifungal properties, TA-1 enhances the NK cell system by stimulating the immune response, enhancing the production of new immune cells, and inhibiting viral replication.

Once activated, the immune system works to kill bacterial, fungal, and viral infections while stimulating the production of antibodies. Antibodies are then used by the immune system to neutralize pathogens such as bacteria and viruses.

### Benefits of Thymosin alpha 1:

- Enhances the function of immune cells
- Effective for acute and chronic infections
- Helps eradicate the unhealthy cells
- Has antibacterial, antiviral and antifungal properties
- Suppresses tumor growth
- Increases vaccine effectiveness
- Protects against oxidative damage

Approved in over 30 countries for the treatment of hepatitis B and hepatitis C, TA-1 is being studied for its effectiveness in the treatment of Lyme disease, AIDS, and cancer to name a few. Not surprising when you consider the crucial role our immune system plays in combating viruses, bacteria and disease.

## TA-1

### IMMUNE DEFENSE

**Recognized for its antibacterial, antiviral and antifungal properties, TA-1 restores immune function and regulates the immune response.**
