

# TESAMORELIN & IPAMORELIN

## THE FAT BURNER

(Injectable)

Scientists who measure overall growth hormone levels report that GH production rises during childhood, peaks during puberty, then declines from middle-age onward. This happens because of a decline in growth hormone releasing factor which signals the pituitary to produce growth hormone. This decline often results in a hormone deficiency that can lead to decreased energy and vitality, and a decline in overall health and fitness.

Restoring growth hormone to optimal levels has been shown to increase lean body mass, lower body fat, improve the speed of recovery after workout or injury, increase bone density, heighten levels of cognition, improve memory, promote cardiovascular health and improve your overall sense of well-being.

A popular option for those seeking to restore their youthful vitality is a combination of two Growth Hormone Releasing Peptides (GHRP) called Tesamorelin and Ipamorelin. Together, these two remarkable compounds work synergistically to stimulate the pituitary gland to produce and secrete your own natural growth hormone at more youthful levels.

---

### FDA approved for the treatment of Visceral Body Fat (VAT)

---

Tesamorelin is the most effective, most fast-acting growth hormone releasing peptide on the market, producing the quickest IGF-1 increase of any peptide available today. Along with its HGH releasing properties, this powerful peptide is FDA approved for the treatment of Visceral Body Fat (VAT) which wraps around your organs putting unnecessary strain on them.

Developed by pharmaceutical giant Novo Nordisk, Ipamorelin also increases growth hormone secretion and promotes the production of IGF-1 in the liver independent of growth hormone levels. In addition, Ipamorelin has no effect on ACTH which stimulates the release of Cortisol.

For those who want to experience all the benefits that come with healthy hormone levels, the combination of these two powerful peptides is hard to beat when it comes to quickly, safely and affordably maximizing growth hormone production.

## Tesamorelin Ipamorelin

### MAX HGH OUTPUT

**These two powerful peptides work synergistically to burn fat and maximize your natural growth hormone production.**
